

Table 11 : Results of Linearity of Tadalafil

Concentration %	Average Area	RSD%
50 (36.9mg/L)	530485	1.11
80 (56.04mg/L)	779603	1.09
100 (73.8mg/L)	1044488	1.12
120 (88.56mg/L)	1253386	1.25
150 (110.7mg/L)	1562480	0.95

$$R^2 = 0.999$$

$$\text{Slope} = 14175$$

$$\text{Intercept} = 359.84 \quad \text{LOQ} = 7.2 \text{ mg/L}$$

$$\text{LOD} = 2.4 \text{ mg/L}$$

The calibration curve equation: Absorbance= $14175x + 359.84$

Calibration curve of average areas of tadalafil versus the conc. % gives the linear curve of tadalafil shown in figure (10) .
