

The lighting is carried on four rectangular, symmetrically aligned suspended light structures. The ambient lighting is produced by uplights, with direct light on the tables and floor produced by pairs of downlights. Spotlights can also be mounted on the structure, if required, to emphasize focal points on the walls.

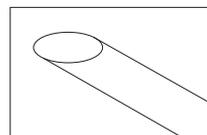

Light structure with uplights designed for compact fluorescent lamps, downlights for halogen lamps, and track-mounted spotlights.

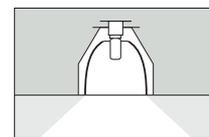

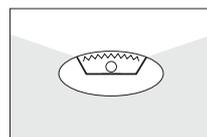

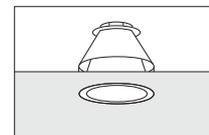

Ambient lighting in the multifunctional space is produced by indirect luminaires mounted on six linear light structures installed across the width of the space. Downlights for halogen lamps are arranged between the suspended structures. These downlights can be dimmed for special occasions or for people to take notes during slide or video presentations. Singlets arranged along the side walls take spotlights for accent lighting, if required.

Suspended light structure with indirect luminaires for fluorescent lamps.

Recessed downlight for halogen lamps.

Singlet with spotlight.
