The Ability of the Economic Value-added Indicators to Predict the Performance of Industrial Companies

Abstract
The manifestation of the problem of study in two directions, the first multi-approved entrances to analyze and predict the performance of companies, and other confined to recent trends that depend entrance of economic value added. Because these approaches has been diverse and multi-standards-based indicators to evaluate and predict the performance of companies. The second dimension that some of these approaches suffer from flaws in the accuracy of the expression of their content, especially entrances that uses the concepts of profitability on an accrual basis because of "the flexibility offered by some applications and accounting standards to show signs of these concepts actually better than the performance Representative And so the purpose of this study is to examine the ability of the economic value-added indicators to predict the performance of industrial companies
